## ABOUT OUR COMPANY. . .

**HARGRAVE Custom Foundation Repair and Drainage Correction**, was incorporated as HARGRAVE HOME REPAIR, INC. by Jerry and Margie Hargrave in 1986. Hargrave continues to be a family owned and operated foundation repair company, committed to the highest quality, most professional and affordable foundation repair in the community. Owners of the company are directly involved in the business. The men installing our piers are long time employees of our company and are highly trained and skilled in all aspects of foundation repair.

HARGRAVE installs STEEL pipe piers for both exterior and interior foundation stabilization. Manufacturing various steel bracket designs at our own facility allows us to provide the type of repair that is most appropriate for your home. Steel piers provide trouble-free foundation stability for the lifetime of your home and, in almost all cases, are backed by our lifetime, transferable warranty.

Hargrave's GPR (Ground Penetrating Radar) equipment locates interior grade beams under the slab which allows for a customized repair of any interior slab. As an alternate to installing interior piers to correct settlement, Hargrave also uses expanding **polyurethane foam injection**, where appropriate. "Polyfoam" injection can also be used by our experienced technicians to raise sidewalks, driveways, pool decks, etc.

Since an important aspect of foundation maintenance is proper drainage, HARGRAVE also offers several types of drainage improvements, including French drains, swales, atrium drains, and channel drains.

Whatever foundation or drainage problem may arise, our staff is fully qualified to get the job done with a quality product that is professionally and expertly installed.

Still not convinced?
